

COMMITTEE OF THE WHOLE - (WORKING SESSION) – MARCH 20, 2007

5 YEAR PAVEMENT MANAGEMENT PROGRAM

Recommendation

The Commissioner of Engineering and Public Works in consultation with the Commissioner of Finance and Corporate Services recommends:

1. That the proposed 5 Year Pavement Management Program be approved; and
2. That the Commissioner of Engineering and Public Works be authorized to engage external professional services for the preliminary engineering and design of the projects proposed in the 5 Year Pavement Management Program upon approval of the 2007 Capital Budget Item EN-1655-07 Pre-Engineering Pavement Management Program.

Economic Impact

The 5 Year Pavement Management Program will require an investment of \$46,732,600 (excluding interest). The capital component of \$45,752,600 compares to the \$45,000,000 (excluding interest) which would be required over the next 5 years under the previous Roads Program. Capital Funding is provided through the issuance of debentures while maintenance related costs are funded through the Operating Budget. The issuance of the long term debt will have an estimated interest cost of \$13,500,000 when the projects are complete.

The requirement per annum is broken down as follows:

Year	Long Term Debenture (LTD) Amount	LTD Annual Principal & Interest On Issue	Annual Maintenance	Total Operating Budget Impact	Annual Impact of Tax Rate (1%=1,014,037)	Cumulative Operating Budget Impact
2007	\$10,815,000	\$1,400,592	\$200,000	\$1,600,592	1.58%	1.58%
2008	\$6,592,000	\$853,694	\$240,000	\$1,093,694	1.08%	2.66%
2009	\$9,064,000	\$1,173,830	\$240,000	\$1,413,830	1.39%	4.05%
2010	\$9,084,600	\$1,176,497	\$160,000	\$1,336,497	1.32%	5.37%
2011	\$10,197,000	\$1,320,558	\$140,000	\$1,460,558	1.44%	6.81%
Total	\$45,752,600	\$5,925,171	\$980,000	\$6,905,171		

The cumulative annual impact after year 5 of the 5 Year Payment Management Program to the operating budget as a result of issuing debentures in the amount of \$45,752,600 and funding the \$980,000 5 year maintenance program is \$6,905,171 or 6.81% on the tax rate. The payments will continue over the term of the debentures which has been typically 10 years.

The Long Term optimization of resources can be achieved through City initiatives such as the Pavement Management System. Modeling these figures within the Long Range Financial Planning Model so that future funding implications are known and can be planned for at the earliest possible point in time will allow for budgetary and/or program changes to be considered accordingly.

It should be noted that 2007 to 2008 is a transition year in implementing the 5 Year Pavement Management Program. The 2007 program reflects the older Road Reconstruction, Road Resurfacing and Rural Road Upgrade combined programs based on a 'worst first', Road Needs methodology. The 2008 and beyond program reflects a life cycle triggered and greatest-return-on

dollar invested methodology. The increased dollar figures for the 2007 year reflect updated project benchmark estimates using unit rates developed in the Pavement Management System.

Communications Plan

There has not been public consultation to this point. Implementation of individual projects would be subject of the Engineering Services Department standard communication with affected residents prior to and during construction.

Purpose

The purpose of this report is to obtain Council approval of the 5 Year Pavement Management Program, Project Level Program requirements based on the Level Of Service to maintain an overall average road network rating being a Pavement Composite Index (PCI) of 70 out of 100 (possible points) and communicate the associated funding requirements.

Background - Analysis and Options

Pavement Management System Project Initiation

On December 6, 2004, Council approved the contract award for the Pavement Management System project. The purpose of a Pavement Management System (PMS) is to assist City staff in the coordination, planning and implementation of its roadway maintenance, rehabilitation and construction programs.

Traditional Roads Program Methodology

On June 27, 2005, Council endorsed in principle, Road Resurfacing, Road Reconstruction and Rural Roads Upgrading Programs for 2006.

Annually, staff brings forward a report to seek Council endorsement of the proposed 5 Year Roads Program and authorization to employ external professional engineering services for the preliminary engineering and detailed design of these proposed construction projects.

The adoption of this program was to deal with the increasing backlog of deteriorating roads and to provide Council with a comprehensive plan for road upgrading across the City. These programs (Road Resurfacing, Road Reconstruction and Rural Road Upgrading) were prepared on a 'worst first' basis and road sections are evaluated utilizing factors such as traffic volumes and condition rating of the road facility. Consideration was also given to other factors such as roads in the same vicinity that are also deficient and that were constructed in the same era as well as needs identified regarding the condition of existing underground services such as sewers and watermains.

This last report advised Council that a new program would be coming forward with the implementation of a Pavement Management System.

New Asset Management Methodology

On February 16, 2006, Council endorsed through resolution, InfraGuide and the best practices with respect to Asset Management. Through InfraGuide, a comprehensive business strategy involves three pillars: People, Information and Technology.

The Essential Elements of an Asset Management Plan are:

1. *What do you have and where is it?*
2. *What is it worth?*

3. *What is its condition and its expected service life?*
4. *What is the level of service expectation, what needs to be done?*
5. *When do you need to do it?*
6. *How much will it cost and what is the acceptable level of risk?*
7. *How do you ensure long term affordability?*

People, Information and Technology in practice with the Essential Elements is the key to a successful implementation of an Asset Management Plan.

It is within this framework that the 5 Year Pavement Management Program is being reported.

Pre-Engineering

The Engineering Services Department completes design and tender documents for Capital construction projects annually at the earliest possible time. Having early tenders produces savings to the City through lower unit rates from bidders and earlier project start and finish dates, resulting in reduced impact to citizens and the environment.

Engineering Services has traditionally worked on Pre-Engineering for various projects one year in advance of their proposed construction year. This methodology becomes restrictive when the annual budget approval process goes beyond February of the current calendar year.

Staff seek Council's approval of Pre-Engineering beyond the traditional 1 year window to a multi-year window. This will allow the City to have completed design and tender documents "on the shelf" for multiple projects, in multiple years ready for bidding. With projects in this state, the City can go out to tender at the earliest possible time and take advantage of lower rates and favourable construction timing.

5 Year Pavement Management Program

The Infrastructure Management Division of the Engineering Services Department is responsible for infrastructure records, engineering related data and data management and strategic analysis related to the City's civil infrastructure. The Division maintains road related data and undertakes the condition assessment of the City's roads annually in partnership with the Design Services Division and the Public Works Department.

The base data required for the Pavement Management System is generated as a regular function of the Infrastructure Management Division and is fully integrated with the Enterprise G.I.S. Database.

1. What do you have and where is it?

The inventory of City owned active roads are summarized in the following table by Ward, Surface Material Type.

Table No.1

Summary of Road Network - By Ward and Surface Material			
Ward	Surface Material	Total C/L (km)	Total Lane (km)
1	Gravel / Stone	24.23	48.46
	Asphalt	235.48	503.46
	Surface Treated	28.61	57.21
2	Gravel / Stone	8.50	17.00

Summary of Road Network - By Ward and Surface Material			
Ward	Surface Material	Total C/L (km)	Total Lane (km)
	Asphalt	153.27	347.89
	Surface Treated	6.25	12.50
3	Asphalt	101.25	258.83
4	Asphalt	178.12	449.81
5	Asphalt	74.63	174.99
	Surface Treated	3.27	6.53
Total		813.61	1876.68

2. What is it worth?

Based on the Reconstruction unit rate used in the Pavement Management System, staff have estimated the replacement value of the City's entire road network to be approximately **\$1.8 BILLION DOLLARS**. This figure does not include the value for underground servicing such as water and wastewater systems nor boulevard amenities such as sidewalk or street lighting.

3. What is its condition and its expected service life?

The condition of a road is determined through a combination of field inspection and review of various analytical factors. Individual ratings and indices are combined into an overall index called a **Pavement Composite Index (PCI)** with an ascending range of 0 (worst) to 100 (best). This index is comprised of 3 major subsections being:

- Health** The condition of a road which includes surface ride comfort, structural distresses and its ability to properly drain water away from the road's structural components;
- Capacity** The current, measured traffic volume (Annual Average Daily Traffic) as compared to the theoretical capacity of a road;
- Physical Environment** The remaining considerations surrounding the behavior of a road including skid resistance, safety and geometry.

A complete definition and description of the Pavement Composite Index is included in Attachment No. 1.

According to the Pavement Management System, our current average network condition for all City roads has a **PCI of 86.7 out of 100** possible points. This differs from an average of 86.2 out of 100 previously reported which reflects an update to road condition to the network based on work done in 2006.

Our current average network condition distribution for all City roads is summarized in the following table:

Table No.2

Pavement Management System Grouping	Value Range	Network Distribution
Excellent	80 to 100	81.6%
Good	60 to 80	15.8%
Fair	35 to 60	2.6%
Poor	20 to 35	0%

Pavement Management System Grouping	Value Range	Network Distribution
Very poor	0 to 20	0%

4. What is the level of service expectation, what needs to be done?, and
5. When do you need to do it?

Setting a **Level of Service (LOS)** or a target, is an important and critical step in a proper Asset Management Plan. From Item 1, Report No. 28 of the Committee of the Whole (Working Session) on May 23, 2006, Council set a Level Of Service to maintain an overall average road network rating being a **Pavement Composite Index (PCI) of 70 out of 100** (possible points).

Applicable treatments that fall within Capital and Operations and Maintenance Budget categories are as follows:

Budget Type	Treatment Name
Operating	Crack Seal
Operating	Drainage Treatment
Capital	Complete Reconstruction
Capital	Gravel To HCB
Capital	Gravel To LCB
Capital	LCB Surface Treatment
Capital	LCB Upgrade To HCB
Capital	Micro Surface
Capital	Mill And Overlay
Capital	Pulverize And Overlay
Capital	Remove And Replace

Attachment No. 2 includes a detailed Project Level Program This list is sorted by the following criteria:

- Year
- Treatment Name
- Street Name
- Street From
- Street To

Please note that the Pavement Management Program reflects a shift to more preventative and rehabilitative methods of intervening strategies in the lifecycle of a road such as Crack Sealing, Micro Surfacing and Mill and Overlay. This philosophy will provide the City with its greatest return on every dollar invested to maximize the life of our road asset.

6. How much will it cost and what is the acceptable level of risk?

Based on the target Level of Service, investment required over the next 5 years are as follows:

Year	Capital Budget	Operating Budget
2007	\$10,815,000.00	\$200,000.00
2008	\$6,592,000.00	\$240,000.00
2009	\$9,064,000.00	\$240,000.00
2010	\$9,084,600.00	\$160,000.00
2011	\$10,197,000.00	\$140,000.00

Ongoing discussions take place with staff of our Public Works Department regarding the conditions of existing underground services such as storm and sanitary sewers and watermains. If there is also a potential need to perform substantial repairs or replacement of underground services in the near future, then the road need in those locations will be aligned to remedy both deficiencies at the same time.

7. How do you ensure long term affordability?

As the City's road infrastructure, information, systems and technology matures, multi-faceted integration across all asset classes such as roads, structures, pipes and amenities will be realized. This is a natural path not only from an engineering technical analysis but should also be embraced from a financial perspective.

We must acknowledge that activities such as Crack Sealing and Drainage Treatment directly affect the lifecycle of a road. Future funding requirements will shift year to year between preventative and rehabilitative types of intervention such as Crack Sealing and Mill and Overlay.

Ensuring that the funding requirements are captured in the long range financial planning model and that any increases to proposed funding requirements are supported, will ensure that the road network is maintained at our target Level of Service.

Meeting the target level of service is critical to maximize the benefit for every dollar we invest in road rehabilitation which will directly reduce costly future road reconstruction. Should current and future funding levels not be supported, we risk further deterioration of roads, a reduced level of serviceability and increase long term maintenance costs for our road system, without the opportunity to achieve sustainability.

Regional Implications

There are no Regional implications.

Relationship to Vaughan Vision 2007

This report is consistent with the priorities previously set by Council.

Service Delivery Excellence

We are able to develop and establish service level standards that are sustainable and provide effective and efficient delivery of service.

Manage our Resources

The City has a significant investment in infrastructure that requires a process and a plan to ensure that its repair and eventual replacement is properly managed.

Communications and Public Relations

Through endorsement of the InfraGuide Best Practices, we strengthen Corporate Image and identity.

Technology and Innovation

The system conforms with the policies, standards and procedures as defined through the Corporate G.I.S. Initiative. The 5 Year Pavement Management Program achieves the Corporate Strategic Plan to develop and implement an Infrastructure Management System to enhance

safety through proactive repair and replacement and improve financial efficiency and return on investment through life cycle costing.

Conclusion

The purpose of this report is to obtain Council approval of the 5 Year Pavement Management Program, Project Level Program requirements which meets the Level Of Service to maintain an overall average road network rating being a Pavement Composite Index (PCI) of 70 out of 100 (possible points) and to communicate the associated funding requirements.

Attachment No. 1 – Summary of Terms

The Pavement Composite Index (PCI) definition

PAVEMENT COMPOSITE INDEX (PCI) RATING					
Category	Category Weight	Variable	Variable Point	Variable Weight	Methodology
Health	80%	Surface Condition	0 - 10	40%	MDC
		Structural Adequacy	0 - 20	40%	MDC
		Drainage	0 - 15	20%	R
Capacity	10%	Capacity	0 - 100	100%	MDC
Physical Environment	10%	Skid		0%	-
		Safety	0 - 100	50%	AC
		Geometry	0 - 100	50%	AC

Methodology Terminology

Model Deterioration Curve (MDC)	Subject has a separate life cycle model applied to it to predict future performance.
Rating (R)	Subject has a rating and forms part of a greater computation.
Analyze and Compute (AC)	Subject is studied for various conditions and a rating is computed based on the analysis.

General Terminology

Network Level	Reviewing a particular piece of information or state with respect to all City roads as a whole.
Project Level	Reviewing a particular piece of information or state with respect to an individual roads section as defined by a road, from an intersection, to an intersection.

Health Terminology

Surface Condition	Maximum 10 Point Rating related to driving ease, comfort and safety. Inadequacies for paved surfaces include excessive or uneven crowns, washboarding, raveling and bumpiness because of cracking, sealing and rough patching. Inadequacies on loose top surfaces do not include situations that can be readily corrected by maintenance blading.
Structural Adequacy	Maximum 20 Point Rating related to the capability of the surface and base courses to support a load and to resist deformation or rupture. Distress signs include cracking, rutting, heaving, pot-holing, roughness, alligating, dishing, breakup, distortion, frost boils, soft spots, etc.
Drainage	Maximum 15 Point Rating related the various elements to maintain a well drained surface on a stable subgrade: the height of the grade line; the cross slopes of the crown, shoulders and ditches; the slopes of gutters and frequency of outlets or catchbasins and the adequacy of the storm sewer system; the

capacity of the cross-drains (culverts) and parallel and off-take ditches.

Capacity Terminology

Capacity The Capacity index is a function of the annual traffic volume and the capacity of the road.

Physical Environment Terminology

Skid A measure of skid resistance for future implementation
Safety The safety index is a calculation which is a function of the AADT and the rate and severity of crashes on a road section.

Where Geometry is comprised of the following:

Horizontal Alignment Maximum 10 Point Rating related to the number of Substandard Horizontal Curves and Substandard Horizontal Stopping Sight Distances per length of road section.

Vertical Alignment Maximum 10 Point Rating related to the number of Substandard Grades and Substandard Vertical Stopping Sight Distances per length of road section.

Other

HCB High Class Bituminous (Asphalt Pavement)
LCB Low Class Bituminous (Surface Treatment)

Attachment No. 2 – 2007 to 2011 Pavement Management Program

2007 Pavement Management Program					
Year	Street	From	To	Treatment Name	Cost
